

Raffaele "Raf" Vitale

Staff Product Designer

Toronto, Canada

[raf.works](#) · [deck.raf.works](#) · raf@raf.works

Summary

Staff-level Product Designer with 9 years of experience across B2B platforms, developer tools, and crypto. Technical before AI. Started in engineering, retained a builder's mindset. Prototypes in code, designs for probabilistic behaviour and trust boundaries, and works best in high-ambiguity environments where the patterns don't yet exist.

Experience

Independent Design Practice

Staff Product Designer | 2016 – Present

Running an independent practice embedded with product teams at high-growth startups and scaled tech companies. Engagements span AI-native products, developer tools, design systems, and crypto. Work typically enters at the problem-framing stage, not the execution stage.

Walmart Global Tech

Staff Product Designer, AI Recommendation Systems · Marty AI · Embedded · Oct 2025 – Present

Sellers weren't adopting AI recommendations because they didn't understand the reasoning behind them. Trust wasn't a data problem; it was a design problem.

- Diagnosed that low adoption stemmed from a lack of visible reasoning, not feature gaps. Reframed from "surface more recommendations" to "make the model's intent legible," shifting product strategy and unblocking a stalled roadmap.
- Led UX for SuccessHub: consolidated five fragmented AI recommendation surfaces into a single decision-making experience. Resolved the tension between automation efficiency and seller agency by designing for *why-then-what* rather than action-first flows.

- Defined the trust architecture for Marty AI's seller-facing layer: how model confidence, reasoning context, and actionability surface together so sellers can act on insight without needing to understand the underlying model.
 - Owned end-to-end design across mobile and web, partnering directly with data science to translate statistical behavior into interaction patterns that held up under real-world variance.
-

Obvious

Senior Product Designer, AI Systems · Contract · Q4 2025

LLM-powered products don't fail on UI. They fail on trust: when behavior is probabilistic and the system keeps changing, users lose the thread of what to expect.

- Sole designer on the Skills framework: a system for extending AI behavior over time. Designed the handoff points between model autonomy and user control — enough transparency to feel legible, not so much that it creates friction.
 - Prototyped agent failure states and edge cases as primary decision tools, not for polish, but to pressure-test product direction with founders and engineering before committing to implementation.
 - Established patterns for continuous learning interfaces: how users correct, refine, and build trust with a system that evolves.
-

Theoriq

Founding Product Designer, AI & Crypto Agents · Full Time · 2024 – 2025

AI agents operating with real financial assets demand a different design standard. Mistakes aren't reversible. Took the platform from zero to 140,000 users.

- Sole designer from zero. Defined the entire interaction paradigm for autonomous agents, balancing visibility and cognitive load across a system where users couldn't afford to misread what was happening.
 - Key design decision: show decision points (where the agent chose between options) rather than execution steps. This built more trust in testing than full transparency — users felt in control without needing to audit every action.
 - Translated experimental AI infrastructure into product vision for the CEO and founding team, making abstract agent behavior legible to non-technical stakeholders.
-

Voiceflow

Senior Product Designer, AI Agents · Full Time · Q3 2025

Non-technical users were dropping off during onboarding at high rates. The interface wasn't the issue — their mental model of what an agent *is* was broken before they touched the product.

- Worked with executive leadership to reframe onboarding: less about step-by-step guidance, more about establishing the right mental model before users touched the product. Prototyped and validated multiple framing approaches against activation data.
 - Designed interaction patterns that made LLM behavior predictable, helping users understand where agents succeed and where they won't. Honest constraint communication as a trust mechanism.
-

Coinbase

Senior Product Designer, Developer Tools · Developer Platform · Contract · 2025

Developer tooling for complex blockchain data queries fails at the same place most developer tools do: discoverability under cognitive load. Developers know what they want; they can't find how to get it.

- Designed SQL-based query interfaces grounded in developer interviews and task analysis, optimizing for error prevention and recovery. API constraints shaped design decisions from the start, not after handoff.
 - Contributed to Pay with USDC surfaces where errors in payment UX are costly and trust-destroying. Designed with that asymmetry front of mind.
-

CurbCutOS

Product Design Lead, SaaS Accessibility · Full-Time · 2023 – 2024

Enterprise accessibility compliance was stuck in manual, unscalable audit cycles. Teams shipped blind and discovered failures too late.

- Led the product transition from consulting-led services to a scalable SaaS platform. Core challenge: building interfaces where users understood what the system validated automatically versus where human judgment was still required.
 - Reduced manual audit time by 60% through integrated testing flows, fundamentally changing when compliance feedback entered the development cycle.
-

Additional clients: Revolut, Travelnest, Frequency (Berachain), Graceview.ai, JazzX AI (Microsoft), Artscapy, Kerubin.

Zalando SE

Senior Product Designer, Design Systems · Full-Time · 2021 – 2022

Multiple B2B marketplace verticals, no shared design language. The goal: a system flexible enough to serve diverse product needs without fragmenting into incoherence.

- Contributed to the first B2B design system at Zalando, building component libraries and standards that enabled cross-team consistency without sacrificing the flexibility partners actually needed.
 - Worked directly with engineering to drive adoption, understanding that a design system no one uses solves nothing.
-

Skills & Expertise

AI-Native Product Design

Interaction models for conversational and agent-based AI · Designing for probabilistic behavior and model uncertainty · Trust-building in autonomous systems · Prototyping AI responses and edge cases as decision tools · Continuous learning interface patterns

Technical Fluency & Collaboration

Understanding how AI models behave and fail · Working with research and engineering on model constraints · React/Tailwind prototyping · API-aware design for LLM-powered systems · Cross-functional influence through reasoning and narrative

Tools & Craft

Figma (advanced prototyping, variants, tokens) · Interactive prototyping (ProtoPie, Framer, code) · React, Tailwind, Framer Motion · LLM tooling and prompt systems · AI development tools (Cursor, Claude Code)

Education

University of Fisciano, Salerno — BA Software Engineering (*incomplete*)

Apple Developer Academy — UX / UI Design, Naples, Italy

ILAS Design School — Diploma with Honors
